

Checklist / Preparation for Flea Treatment

Information from Customer on initial phone call:

Customer Name _____ Phone Number _____

Customer Address _____

Type of Structure: Private Home Apartment Office Other _____

Crawl Space Full Basement Yard Pet Kennels Outside

Pets Present Dog(s) Cat(s) Other _____

People in this home: Infants? Elderly or Disabled?

Customer responsibilities PRIOR TO arrival of Technician:

- Pets – have all pets removed from the structure and yard and treated for fleas by a Veterinarian or Licensed Pet Groomer. Ultrasonic flea collars are NOT an effective treatment.
 - Consult with a veterinarian regarding periodic/monthly on-pet treatments
 - NOTE! – pets are the source of the fleas. Preventing fleas on your pets will prevent flea infestations in your home in the future.
- Pets cannot be present during any treatment.
- Aquariums with fish must be either removed or covered and air pumps turned off during treatment
- Birds, reptiles, and other exotic pets should be removed during treatment
- Remove ALL items from all floors – clothing, shoes, toys, pet food and water dishes, litter box
 - Includes closets, under beds, under furniture such as chairs, couches
 - Draperies should be tied back to expose the floor
- Thoroughly vacuum or wash all floor surfaces, including edges of hard flooring
 - Dispose of vacuum bag or contents in a sealed plastic bag
 - Vacuum thoroughly any furniture where pets are allowed to sleep or otherwise spend time – remove cushions and vacuum surfaces, seams, and edges below them
 - Pet bedding and other linens pets sleep on must be washed in hot water or run through a hot dryer for a minimum of 30 minutes
 - If you plan to SHAMPOO any carpets please do so and allow it to dry prior to our visit and treatment
 - If pets have access to basement or garage please vacuum or wash these floor surfaces as well
- Outside – please remove all toys and other objects from lawns or pet areas
 - Remove and properly dispose of all pet wastes in yard or kennels
 - Remove and dispose of yard wastes – leaves, lawn clippings, other plant matter
 - Ensure technician will have access to the back yard

Notes for the customer regarding insecticide applications:

- Natural insecticides are available if desired – please discuss your preference with the technician
- A residual material will be applied to kill adult fleas and larvae. This will be present for 2 to 3 weeks
- A growth regulator will be applied to affect flea eggs and larvae to prevent their development to the adult stage. This may last as long as 6 months.
- Once they have dried all materials used will pose no risk to people or pets that contact the treated surfaces.
- Do NOT expect any chemical odor from our application. Most materials today are odorless or nearly so.
- The more you can clear the floors in the home the more effectively the technician can treat areas where fleas may be living or developing as larvae.

Customer responsibilities FOLLOWING treatment by technician:

- Please do NOT re-enter the treated rooms until any treated surface is DRY – this usually will be within 2 to 4 hours, but may be tested by lightly pressing a tissue to the surface
- Vacuum thoroughly each day for a minimum of 7 days – carpets, upholstered furniture – dispose of contents in a sealed plastic bag after each vacuuming
- Be advised – it is normal to see an occasional flea adult for 2 weeks following treatment. Daily vacuuming will shorten the length of time this occurs. A chemical re-treatment is not necessary in the first 2 weeks.
- Ensure no yard watering occurs for 24 hours

Technician responsibilities upon arrival at account and PRIOR TO insecticide applications:

- Note any existing damage or stains on carpets, walls, and upholstered furniture _____
- Note any valuables, cash, or medications exposed in rooms and ask customer to remove them
- Review customer responsibilities and have them sign the Preparation Form
- Ensure pets are removed for treatment and aquariums covered with pumps turned off
- Ensure ALL items are removed from under beds and furniture, from closets, and pet bowls removed
- Ensure Exterior is prepared for possible treatment:
 - Laundry removed from outside lines
 - Pet water or food bowls removed, pets not present during treatment and until treated surfaces dry
 - All pet waste removed and properly disposed of
- Interview the customer:
 - Where do pets spend their time?
 - Indoors _____
 - Outdoors _____
 - Discuss chemical options and provide proper Prior Notification as required by your state
- Evaluate the job site:
 - Square footage of interior of structure to be treated
 - Square footage of exterior areas to be treated
 - Flea control products used:
 - Interior _____
 - Exterior _____
 - Products sold or given to customer _____
 - Exterior – is it possible the fleas are coming from a surrounding property?
 - Exterior – are there other animals living on this property that are the source of the fleas?
